

## Section 17: Gaining Access to an Android Device

Name:

Choose screenshots for each lab that best illustrates your completion of the lab. Submit by clicking the box and locating the screenshot. Use a black-on-white color scheme for all Terminal sessions.

Lab 1: Install Android VM (133)

Lab 2: Create an Android payload named shell.apk (134)

To install exploit on Android VM, you may need to change the security settings:  
Drag up and select Settings | Security & Location | Google Play Protect | Settings | turn off app scanning

Lab 3: Gain Meterpreter access to the Android VM (134)

Lab 4: Gain Meterpreter access to Android VM using Evil Droid (135)

Lab 5: Use Flappy Bird as a trojan to exploit the Android device (136)

Lab 6: Use ngrok to port forward (137)
